

Lab07 Exercises

❖ Lab07.2. Number Randomizer

Write a program to create a class and inherit from abstract class “NumberRandomizer” for randomizing numbers. Implement the following function:

- **randomizeInBetween:** return a single randomized number in between two numbers
- **randomizeUniqueInBetween:** return array of randomized unique numbers in between two numbers

```
abstract class NumberRandomizer {  
    abstract int randomizeInBetween(int min, int max);  
    abstract int[] randomizeUniqueInBetween(int min, int max, int amount);  
}
```

Console:

```
==== Number Randomizer ===  
1. In between  
2. Unique in between  
3. Quit  
Choose an opt: 1
```
