Lab05 Exercises

❖ Lab05.1. Date

Write a program to allow user to work with date and time. Create a class called “MyDate” with following methods:

- getCurrentDate
- calculateDaysBtwDates
- findDay

***You can use any libraries in Java related to Date and Time. Ex. **Date, SimpleDateFormat, or Calendar**

Console:

```
==== Menu ===
1.  Current date and time
2.  Calculate days btw two dates
3.  Find the day of the week
4.  Quit
Choose an opt: 1
Current datetime is: 02-1-2023 06:07:59

Choose an opt: 2
First date (dd/mm/yyyy): 02/02/2023
Second date (dd/mm/yyyy): 13/02/2023
Difference between two dates is: 10 days

Choose an opt: 3
Input a date: 02/02/2023
The day is: Wednesday
```

Give me the clue please???

```java
SimpleDateFormat format = new SimpleDateFormat("dd-MM-yyyy HH:mm:ss");
Date d = format.parse("01/02/2023");
long milliseconds = d.getTime();
```

```java
SimpleDateFormat format = new SimpleDateFormat("dd/MM/yyyy");
Date date = format.parse("01/02/2023");
Calendar calendar = Calendar.getInstance();
calendar.setTime(date);
int dayOfWeek = calendar.get(Calendar.DAY_OF_WEEK);
```
